

XM satellite radio is the greatest thing to come along in a long time. I drive an 18 wheeler all over the country and there local weather and traffic is an enormous help to me. From a safety stand point I am able to plan my trips to those areas of the country well in advance as to avoiding bad weather and when I get closer I can plan a safer route into and around the cities by the continuous traffic info.

This is not a dependable service that most city local stations can or will provide.

So PLEASE REJECT NAB's petition 04-160

Thank You.... Kenny OLDFORD
